Emerging Technologies
Lab 4 Self Reflection
10/14/2026

The main lesson I take from this lab is that a technology can be a breakthrough without making every application important. Cultivated meat changes how meat can be produced, but adding one restaurant dish does not prove that the technology will change civilization. Keeping those conclusions separate made the agent's answer more useful.

I still find the higher classification difficult to judge when the long-term evidence is missing. The restaurant, school, and grocery cases kept the general finding stable while changing what mattered locally. I wonder how much evidence should be required before calling an emerging technology potentially Promethean rather than simply leaving that possibility open.
